

Ruby Sinreich

This feature is in private beta, and will be publicly launched for our community in March/April. These screenshots are just rough examples. A June presentation would include actual data and more detail.

Nodequeue 'Open source rocks'

View | Edit queue

Simple queue

Simple queues have just one subqueue. Nodes put into a queue are added to the back of the queue; when a node is removed from the queue will be popped out to make room.

Title:
Enter the name of the queue
Open source rocks

Name: *
This is the unique name of the queue. It must contain only alphanumeric characters and underscores. It is used to identify the queue internally. This name cannot change.
opensource

Queue size:
The maximum number of nodes will appear in the queue. Enter 0 for no limit
0

Ordinarily queues are arranged with the front of the queue (where items will be removed) on top and the back (where items will be added) on the bottom. If checked, this will display the queue such that items will be added to the top and removed from the bottom.
 Reverse in admin view

Link "add to queue" text:
If you want a link to add a node to a queue in the "links" section (next to "add new comment"), enter the text here. If left blank no link will be given; note that enabling this feature for any queue will cause an extra query to be run every time a node is loaded. *%subqueue* will be replaced with the subqueue title, if applicable.

Link "remove from queue" text:
Enter the text for the corresponding link to remove a node from a queue. This may be blank (in which case no link will appear) but a remove link will only appear if link, above, is set.

Roles:
Check each role that can add nodes to the queue. Be sure that roles you want to appear here have "manipulate queues" access in the main access control panel.
 site admin
 superuser

Types:
Check each node type that can be added to this queue.

Feedback

Create simple queue with Nodequeue.

Please ensure there is an existing queue with content in it before creating this collection display page.

Chris Messina talks about the Open, Social Web

Hello, innovators and collaborators! I am the newest member of the HASTAC staff (as Cathy wrote on Monday). I have spent much of my first week getting to know the people and tools that will help me do my job as the next Director of New Media Strategy. I thought I'd kick off my blog here with a presentation by one of the people who has shaped my own thinking about the Internet and how it can serve the greater good, Chris Messina.

Is knowledge ever free?

danah boyd's posting "Open-access is the future: boycott locked-down academic journals," on her fabulous Apophenia blog (http://www.zephoria.org/thoughts/archives/2008/02/06/openaccess_is_1.html) has generated a few dozen comments, including my own. I agree with some of her statements and assumptions and then balk at others. There should be a way to get to articles other than through yearly subscriptions to commercial journals at exorbitant prices. Yes!
