# Was It Something I Said?

**Emma Jane Westby**

Community Track

May 22, 2013

**Building Bridges, Connecting Communities**

Wednesday, 22 May, 13

## Session Description:

There is a lot happening in the Drupal community. It's easy to get overwhelmed. As a community we've seen flame-outs and rage-quits. And yet, overall, we have a very healthy community which supports its fellow participants. Most of our participation happens in a text-based environment: in IRC, or in the drupal.org issue queue. It's difficult to read the intention behind words, but very easy to misinterpret what someone is saying.

In this session we'll explore how to give, and receive, useful critiques of our work. We'll talk about the different kinds of critiques that are necessary as an idea develops. The emphasis will be on reviewing subjective work, not the easy stuff like white space at the end of a line. Attendees will come out of this session with tips on:

- a framework for giving useful, and actionable criticism
- critiques of critiques, examples from our own issue queue of what's useful, and what's harmful
- making your reviews easy to implement (making your time investment worth while)
- writing useful reviews outside of your area of competence (i.e. how to review design when you're not a designer; and how to review code when you're not a coder)
- creating a better "ask" that results in the kind of feedback you actually want to receive

Getting better reviews makes us better at our job--and makes Drupal a better product. If you're ready to take your reviews to the next level...if you're ready to help others lift their work out of mediocrity with their head held high...if you're ready to take Drupal to the next level, be sure to attend this session with your friends \*and\* your nemesis.

# Let's Talk!

@emmajanehw  
#crit #drupalcon

Wednesday, 22 May, 13

Hi, I'm emmajane! I wrote what might be one of your favourite Drupal books. I'm the education development coordinator for Drupalize.Me, and we're currently having a sale invest in your Drupal education. You can talk to me after the presentation if you'd like more details.

# drupalize.me

# Growing Up Hogbin

Wednesday, 22 May, 13

Now ... I'm going to break every rule in the book about presentations and start with a story about myself. I'm the daughter of a hacker. But not a computer hacker: a craft hacker. This is a picture of my dad standing in front of a lathe he built. Yes, that's a tree trunk on the lathe. My dad revolutionized wood turning in the 1960s and 1970s.

Wednesday, 22 May, 13

This was our living room growing up. The chairs and the table are solid wood and turned on a lathe. These chairs are now in the permanent collection at the **Yale University Art Gallery** and **Minneapolis Institute of Art**. Growing up, the design process--and especially the design REVIEW process--was a big part of my life. And today, as many of you know, I will give honest, thoughtful feedback when asked.

Wednesday, 22 May, 13

These are a few of the pieces my father and I have collaborated on. Growing up, I learned at that good feedback wasn't about saying "Oh that's nice." In fact I learned at a pretty young age that there were **different kinds of feedback**. When I wanted positive **affirmation**, I'd ask my mum what she thought; but when I wanted a review of my work, I'd ask my dad for a **critique**. Through his feedback, my dad taught me how to give feedback as well.

# The **crit** is an exercise in critical thinking.

Wednesday, 22 May, 13

So **what is a critique?** “Crits”, as they’re known in design school, are group reviews of a work-in-progress. The critique helps students to separate themselves from their work and trains them in the important skill of explaining the reasons behind their solutions. The critique is a basic exercise in critical thinking.

When someone says “critique”, we sometimes hear “critical” and assume that it has to mean something negative. But that’s not the case!

<http://www.aiga.org/guide-whatgoeson/>

Another aspect of design education is the group critique. “Crits” take place at different stages in a project and provide an opportunity to step back and reflect on the project, to exchange critical or supporting ideas, to clarify intentions, and to develop the ability to discuss or even defend one's own work—a necessary skill that will later be important with clients. The critique helps students to deal openly with criticism while it trains them in the important verbal skills of explaining the reasons behind their solutions. They must go beyond “I like it” or “That stinks.” Critiques help students to internalize standards of excellence, to develop a shared vocabulary for discussion, to learn to incorporate useful suggestions from others, and to evaluate their own and others' performances. This process helps students to separate work from self and to acquire the maturity and perspective needed in order to benefit from intelligent criticism. The critique is a basic exercise in critical thinking.

# Critical Thinking

Critical thinking is reflective reasoning about beliefs and actions. It is a way of deciding whether a claim is always true, sometimes true, partly true, or false.

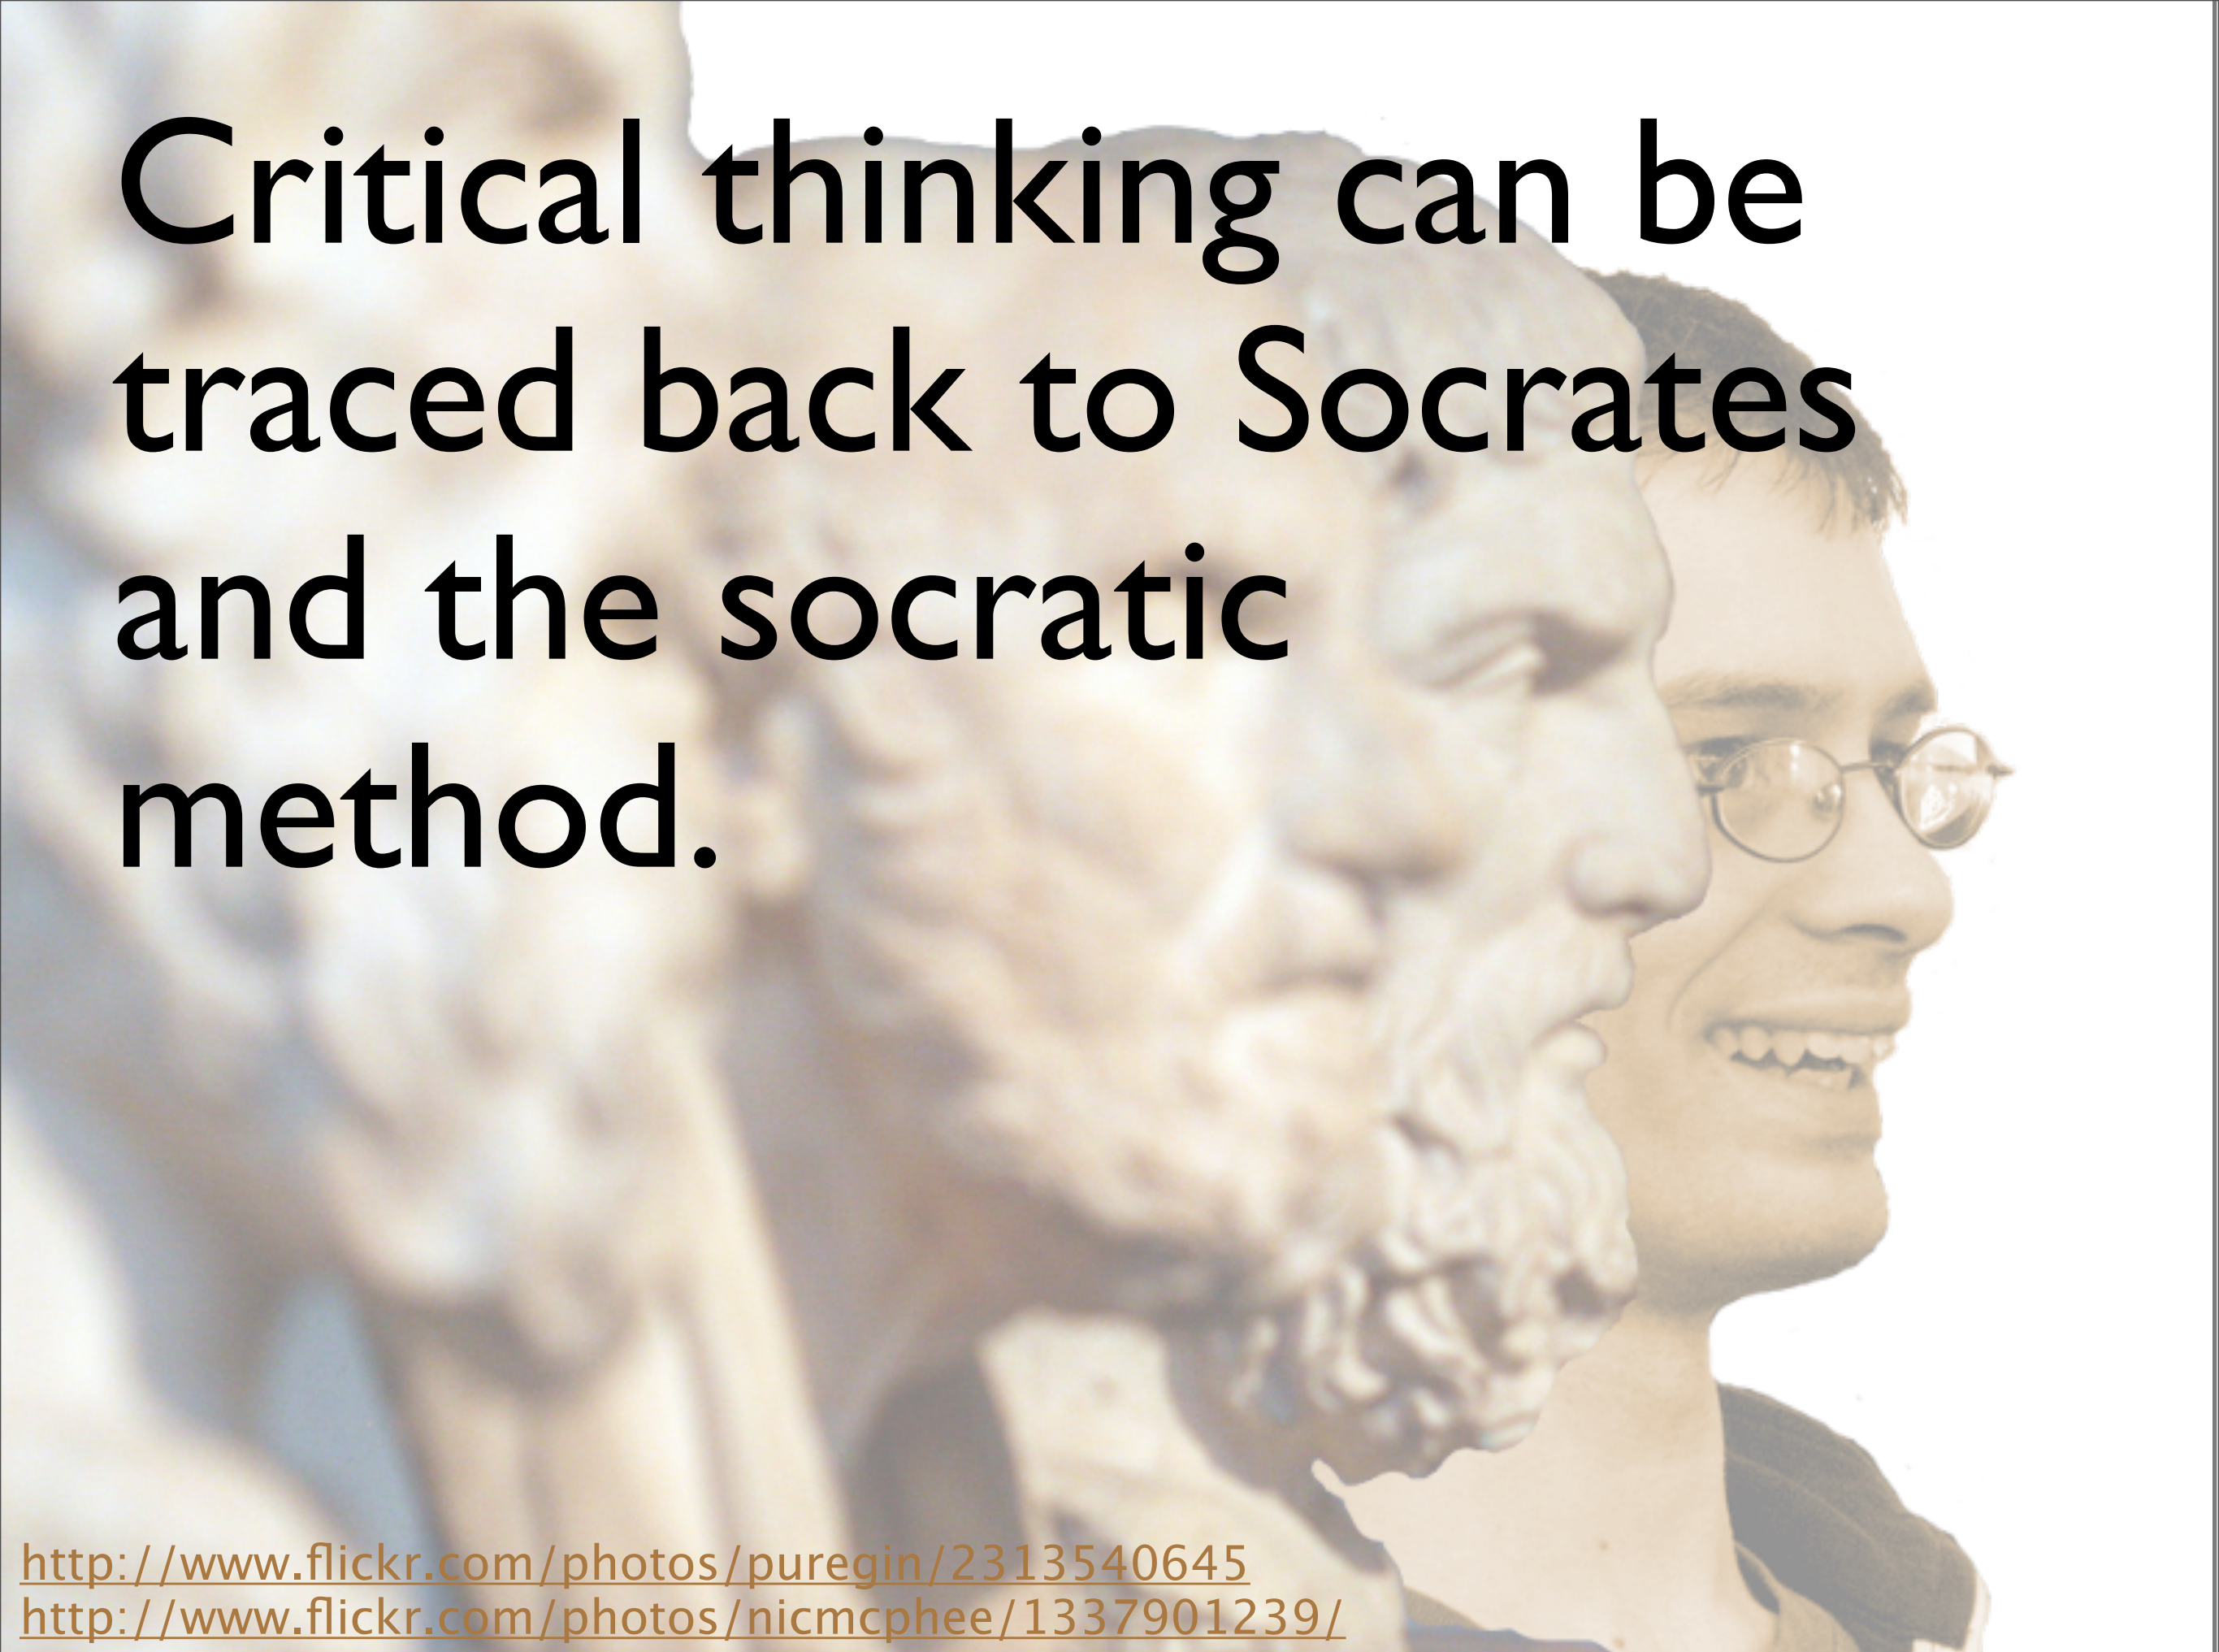

[https://en.wikipedia.org/wiki/Critical\\_thinking](https://en.wikipedia.org/wiki/Critical_thinking)

Wednesday, 22 May, 13

Critical thinking hasn't always been purely negative.

# Critical thinking can be traced back to Socrates and the socratic method.

<http://www.flickr.com/photos/puregin/2313540645>  
<http://www.flickr.com/photos/nicmcphee/1337901239/>

Wednesday, 22 May, 13

In fact critical thinking can be traced in Western thought to the Socratic method of Ancient Greece and, in the East, to the Buddhists (kalama sutta and Abhidharma).

eaton's photo: <http://www.flickr.com/photos/puregin/2313540645>

# from craft to code

Wednesday, 22 May, 13

I grew up with design crits. I've had most of my life to practice giving and getting reviews. It's a skill and one that can be developed over time.

Drupal has grown immensely in the last couple of years. Its review framework is quite mature. Let's take a quick look at our review process.

identify the crux  
of the problem

plan and  
organize

generate  
ideas

conclude on  
best option

organize  
ideas

# Core Gates

- Documentation
- Performance
- Accessibility
- Usability
- Testing

<http://drupal.org/core-gates>

Wednesday, 22 May, 13

Gates are essentially "checklists" that can be used to evaluate a patch's readiness, by both developers and patch reviewers/core committers.

# Let's dive deeper..

Wednesday, 22 May, 13

Now let's dive deeper into the process of giving and getting good reviews.

# critique is a positive verb

Wednesday, 22 May, 13

We know that code reviews are a good thing. Reviewing code makes us better communicators and better coders. Our strong review process makes Drupal a stronger product. For the critique to be a POSITIVE experience though, three elements need to be in place.

1. There must be a **framework**
2. The **reviewer** must be objective
3. The **creator** must separate themselves from their work.

Framework  
must be present

# critique is a positive verb

Wednesday, 22 May, 13

We will spend most of our time as reviewers, not creators. So let's start here.

**“in a culture of optimism  
good honest criticism  
seems to be dying out”**

**Tim Brown**

Wednesday, 22 May, 13

<http://designthinking.ideo.com/?p=18>

The dilemma we face today is that in a culture of optimism good honest criticism seems to be dying out.

ericduran commented

an hour ago

I was about to apply the patch but then after doing a review...

# Caring (just enough) is hard

Wednesday, 22 May, 13

Giving good feedback is hard. You need to be able to care just enough to take the time to give a review, but not care so much that you aren't able to give an objective review. It is exceptionally difficult to not let our biases get in the way.

# Good Feedback

- Is limited to the scope of the work.
- Is actionable.
- Is specific.
- Is timely.
- Acknowledges the time spent by the coder.
- Is thankful the issue is getting attention.

# Bad Feedback

- Extends the scope (“while you’re there...”)
- Has unclear outcomes (“this is ugly”)
- Confuses personal preference with objective worth (“I prefer...”)
- Is outside of the issue scope (“you’re solving the wrong problem”)
- Prolongs discussion (“what if ...”)
- Lags (“if I want a review, I have to sleep”)

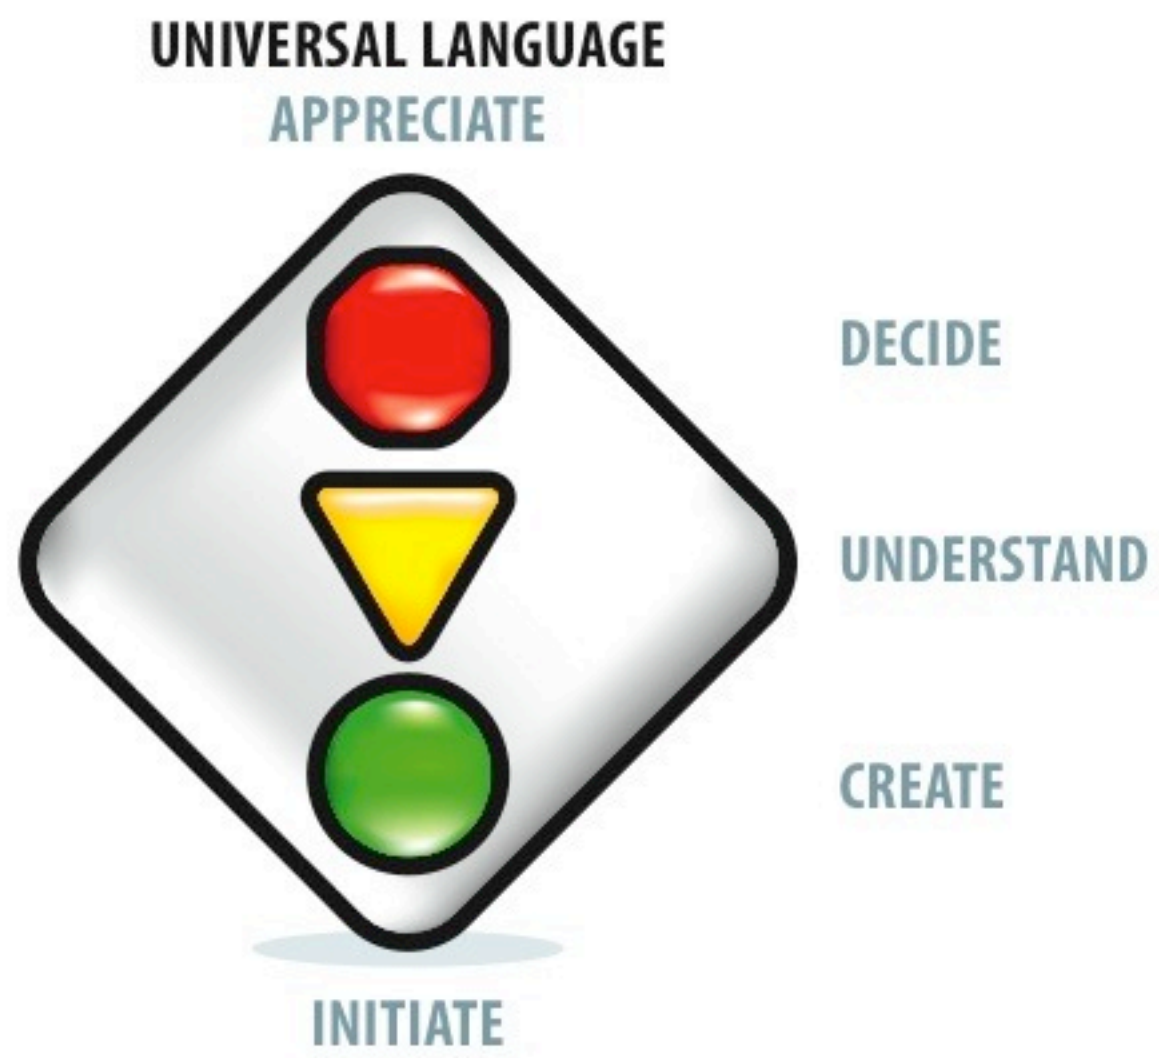

duh.

Wednesday, 22 May, 13

So why don't we do it?

# 4Di

Wednesday, 22 May, 13

.. because we all have personal operating preferences.

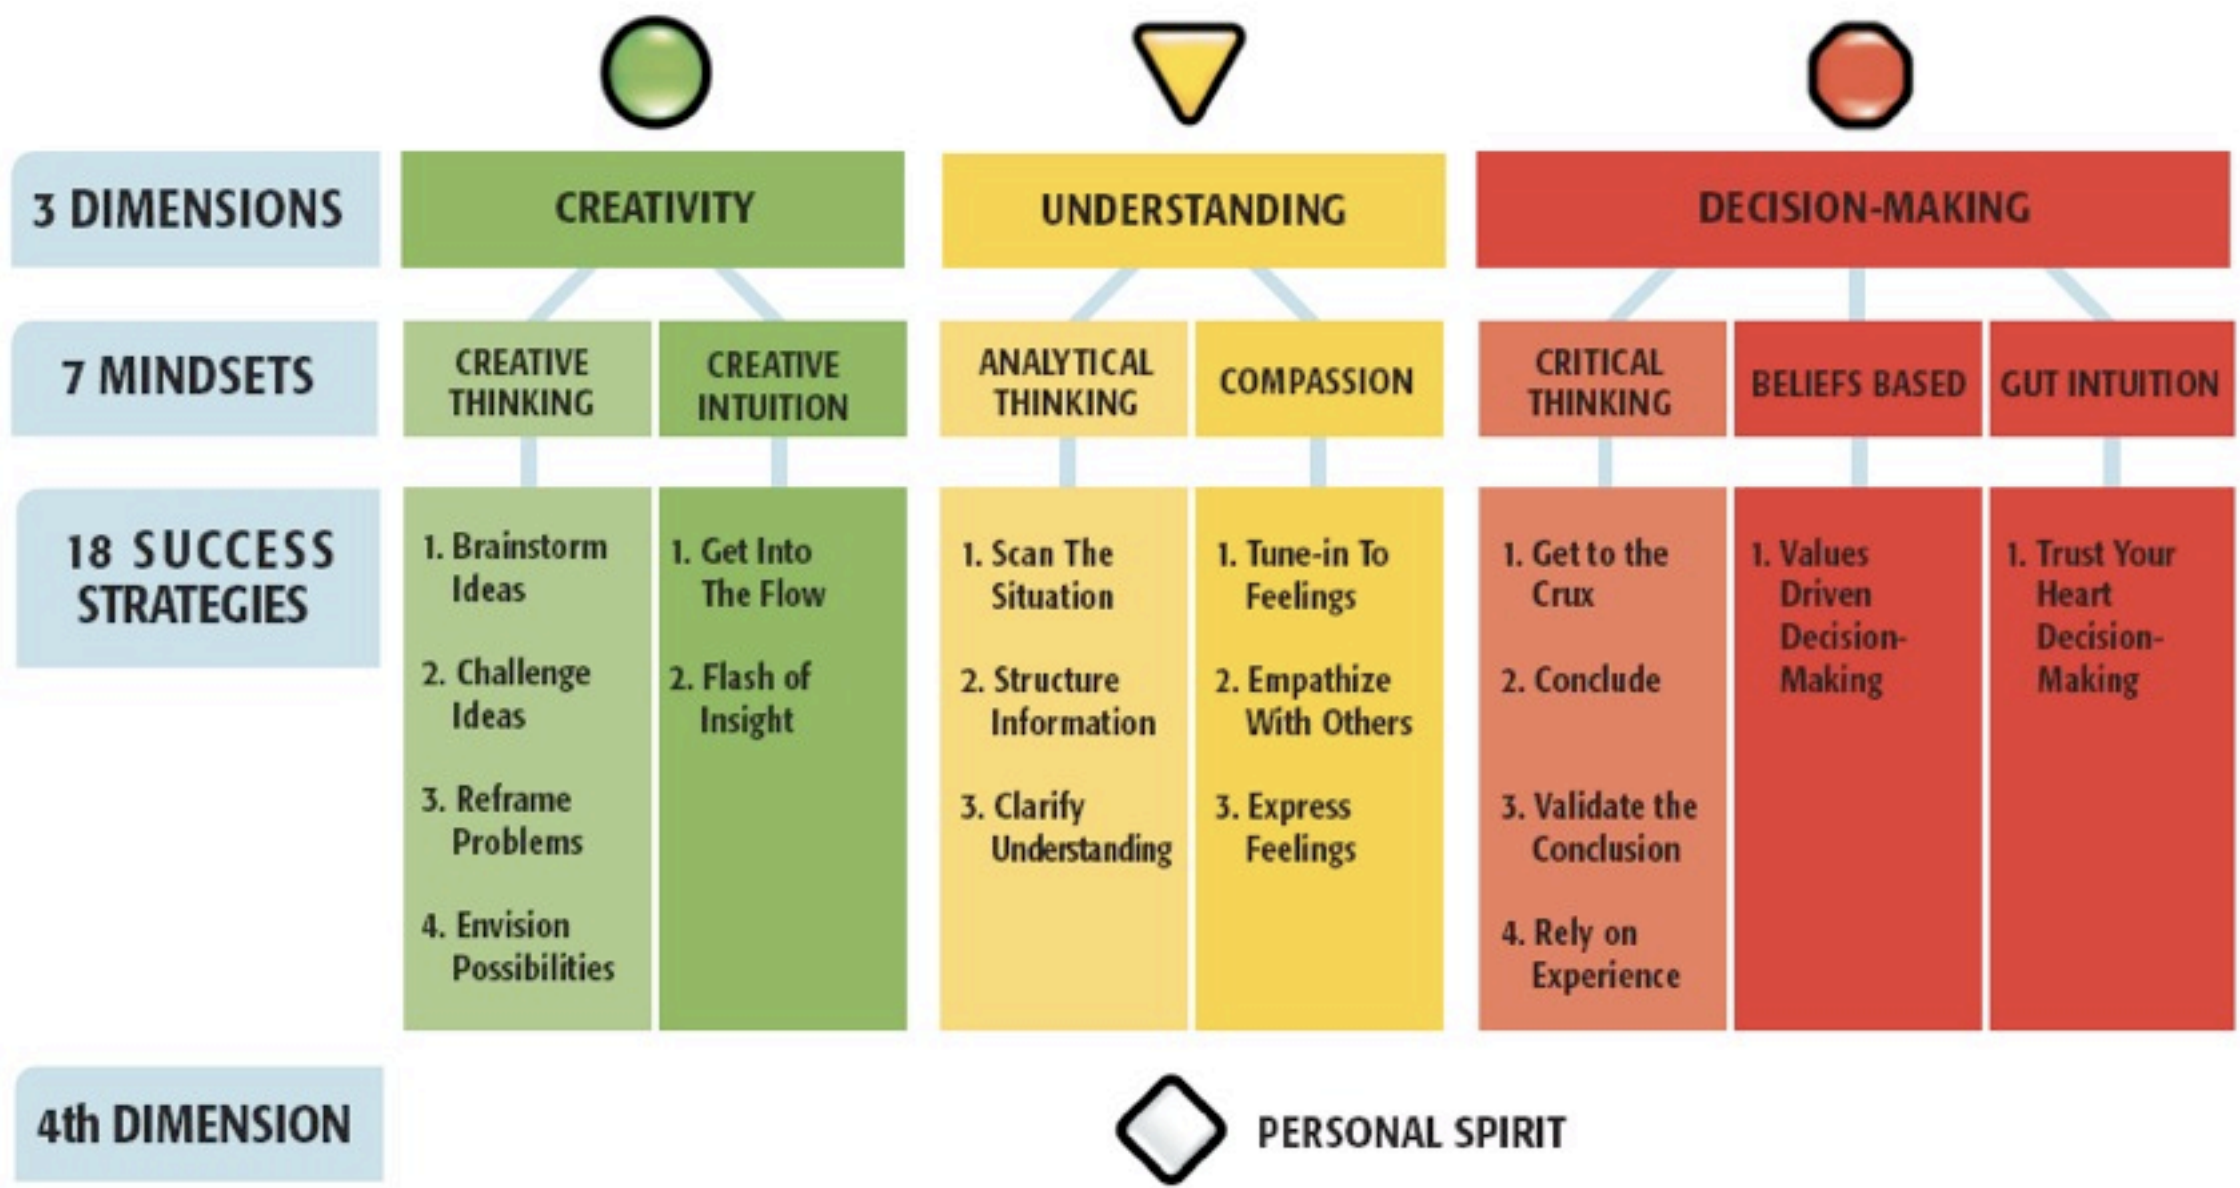

Green --> go

Yellow --> slow down

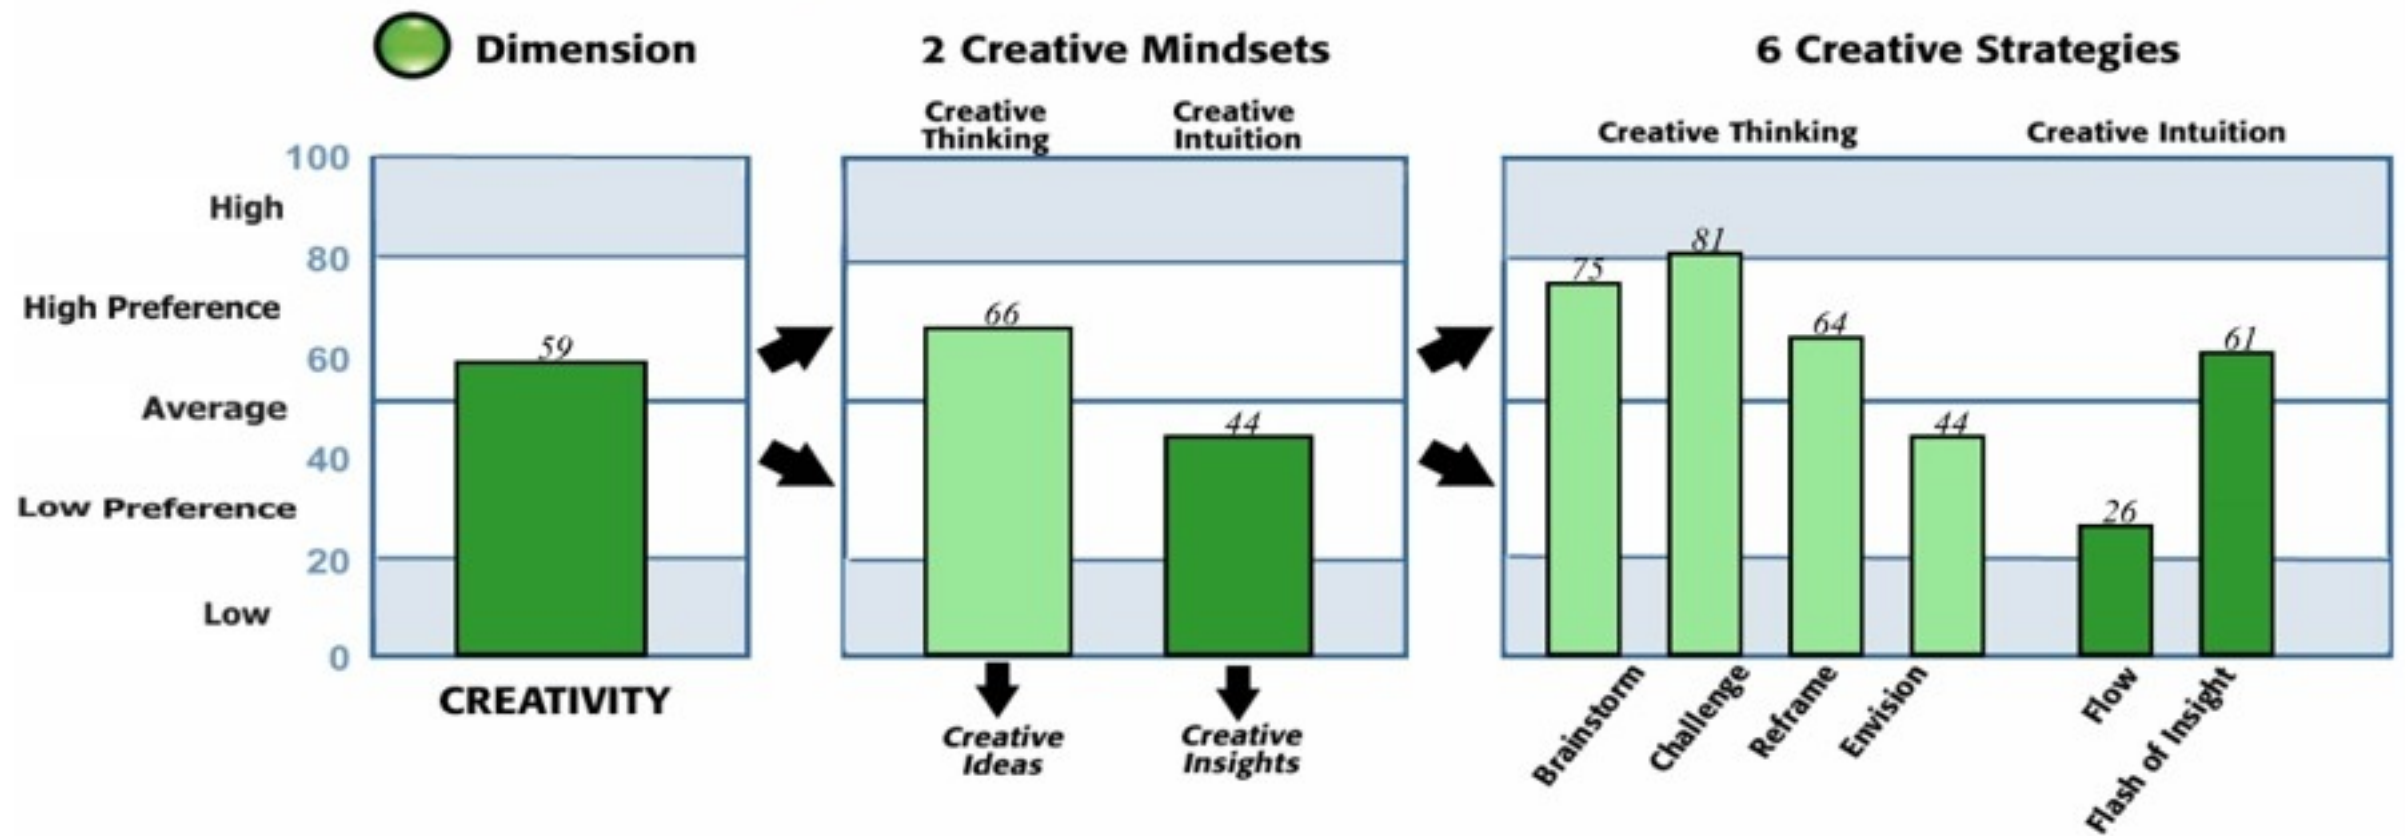

Red --> stop

White --> amplifier

## D1: GREEN - Your CREATIVITY Style

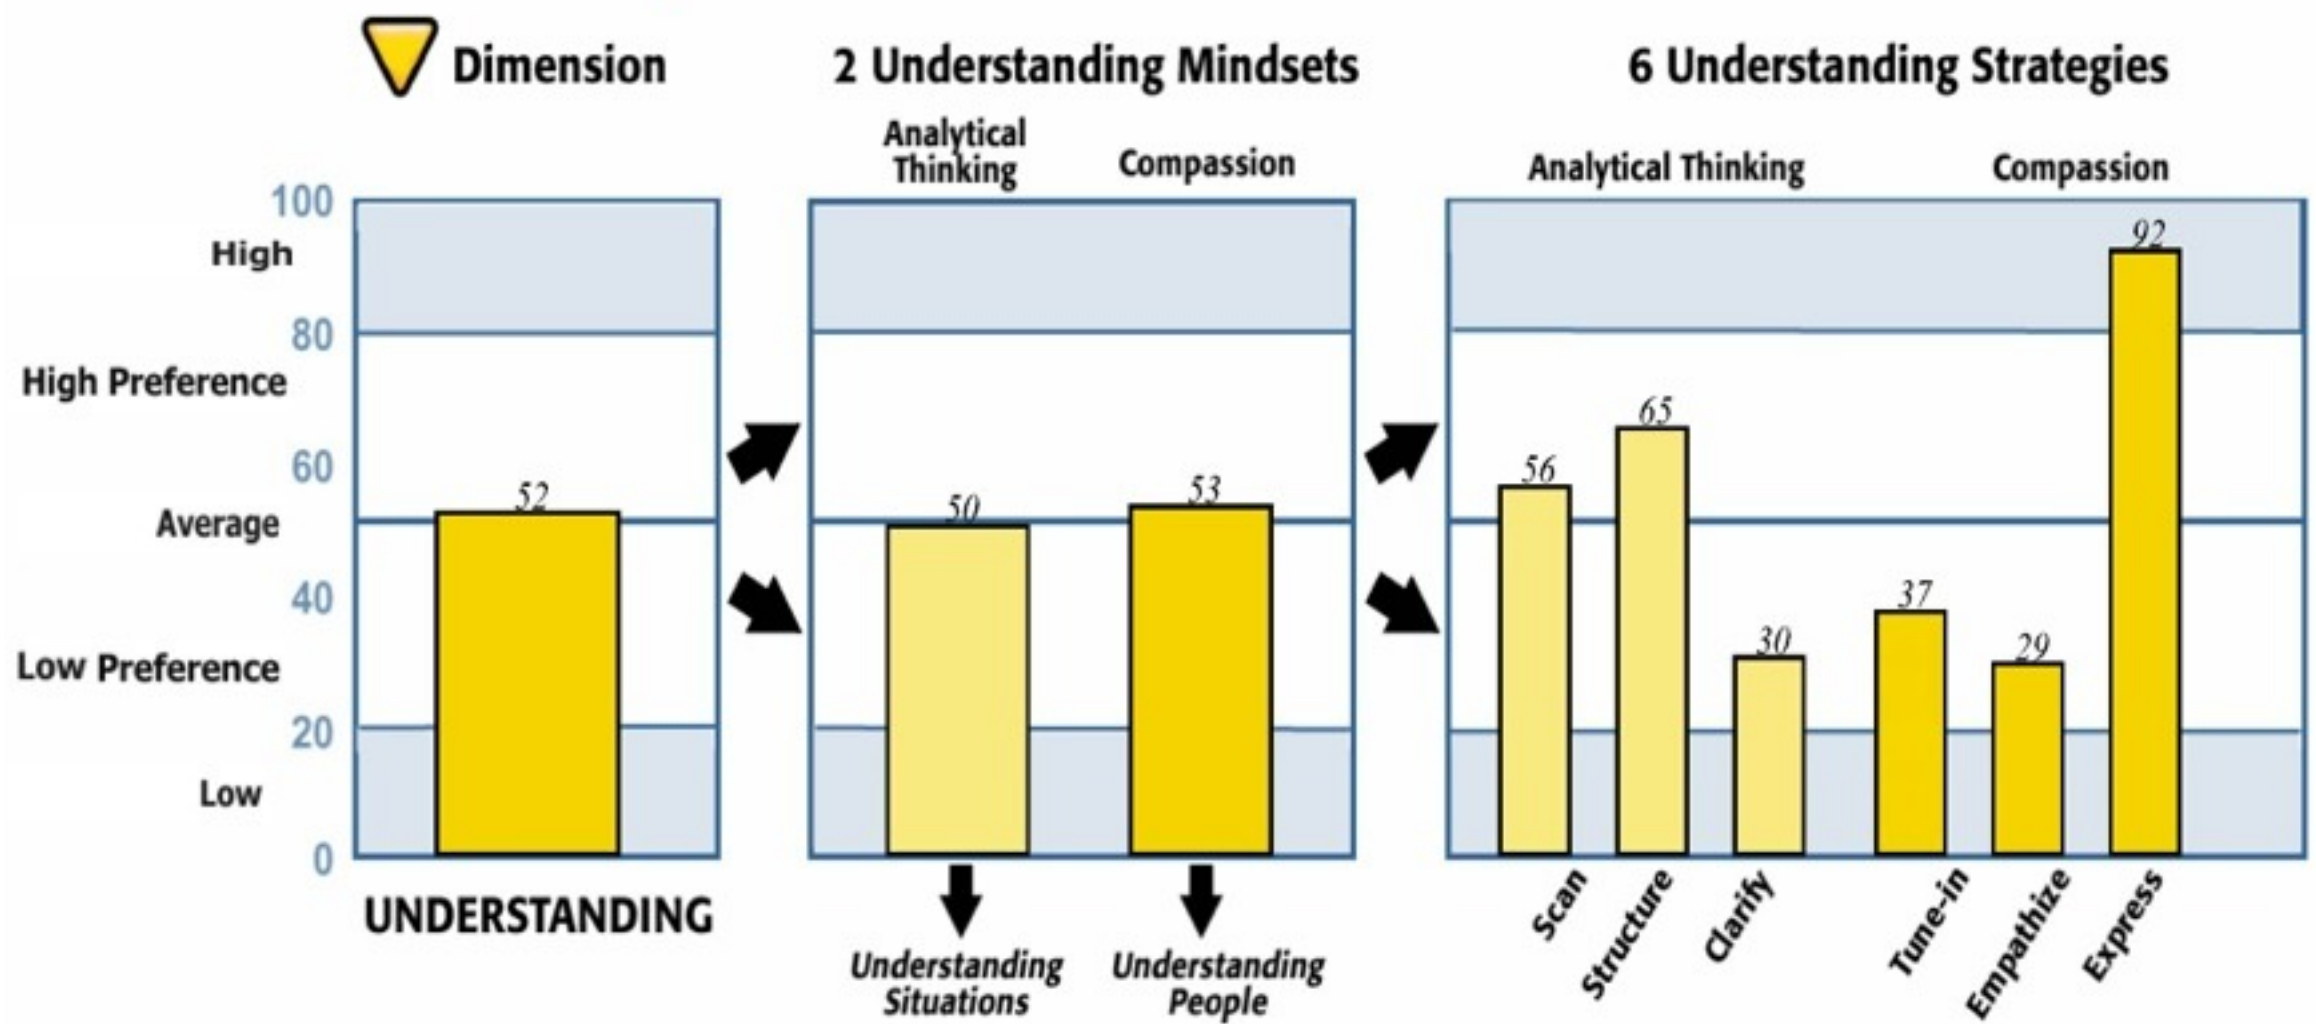

# Green: Creativity

Wednesday, 22 May, 13

Green is creativity. We have two mindsets: Creative Thinking and Creative Intuition. Creative thinking involves “muscling through”. It includes: brain storming, challenge, reframe, envision. Creative intuition “just happens”. It includes: flow and flash of insight.

## ▼ D2: YELLOW - Your UNDERSTANDING Style

# Yellow: Understanding

Wednesday, 22 May, 13

Yellow thinking is understanding. The two mindsets are Understanding Situations (analytical thinking); and Understanding People (compassion). Analytical thinking breaks down into: scan situation, structure information and clarify understanding. Compassion breaks down into: tune-in, empathize, express feelings.

## D3: RED - Your DECISION-MAKING Style

Dimension

3 Decision-Making Mindsets

6 Decision-Making Strategies

# Red: Decision-Making

Wednesday, 22 May, 13

Red thinking is decision making thinking. There are three mindsets this time: Critical Thinking, Values-driven thinking (belief-based decisions); and Intuitive thinking (gut-instinct decisions). Critical thinking includes: getting to the crux, conclude, validate the conclusion, rely on experience. Belief-based thinking and Gut-based thinking are single strategy mindsets.

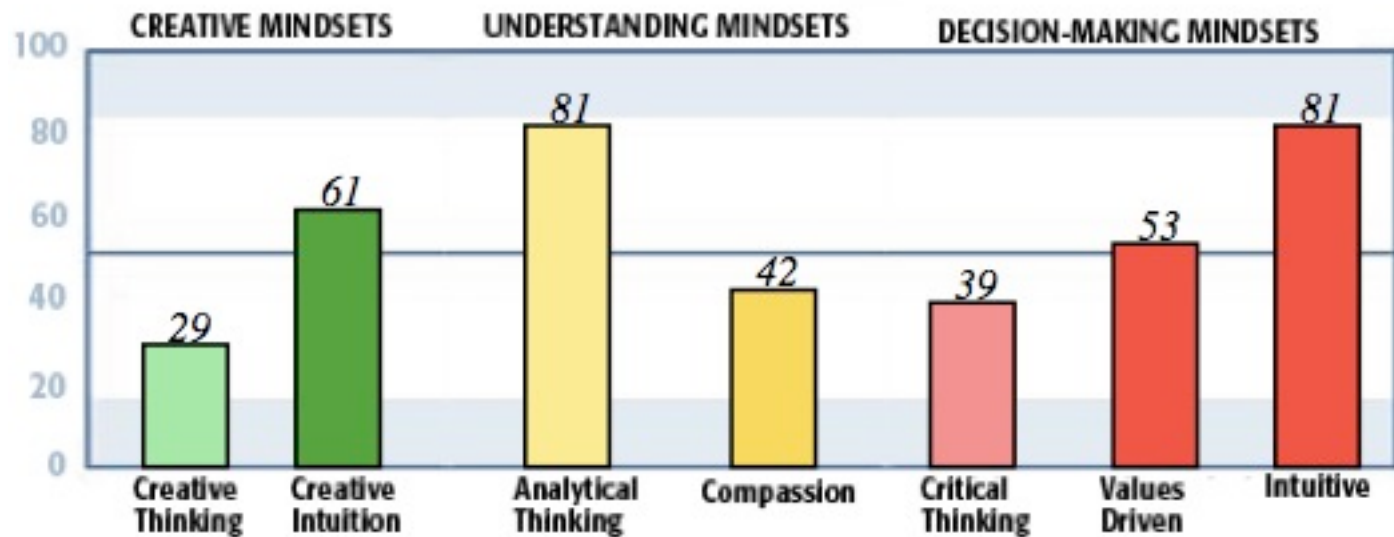

These are me

### Your PERSONAL OPERATING STYLE

### Your Preferred Mindsets Profile:

# Take my feedback with a grain of (yellow) salt.

Wednesday, 22 May, 13

This screen shows you my personal operating style and preferred mindset profile. You can see from the charts that I prefer to gather information. I'm a "yellow" thinker, followed by "red" and then "green" and then "white" (think of the white as my amplifier..I don't go to 'eleven' very often). Within the four dimensions, I am more likely to use creative intuition than creative thinking. (I don't enjoy muscling into new ideas; but solutions often JUMP out at me.) Given a choice, I'd rather analyze data than people. And finally, you can see I'm more likely to rely on gut-instinct when it comes to decision making. In other words: I spent forever analyzing a situation and then I JUMP to a conclusion. Some people might interpret this as "impulsive". It's interesting, isn't it?

**Have you seen these  
preferences at play in  
our issue queue?**

Framework  
must be present

# critique is a positive verb

Creator must  
uncouple from  
their work

Reviewer must  
be objective

Wednesday, 22 May, 13

When I give feedback, and I don't have a framework, I'll probably give you "yellow" feedback. I'll restructure your data. I'll ask for more information. And if I'm unclear, and you're not also a yellow, you'll probably get irritated with me. This is because of a little term known as "hostility bias."

Hostility Bias is the tendency to perceive unclear actions by others as aggressive.

[@drupalizeme](#) Cool. No worries. Just trying to make PHP a better place. Thanks for the link.

[Expand](#)

Wednesday, 22 May, 13

Our experiences affect how we see things...and when things are unclear, we assume they are hostile or broken.

Here's a real world example of hostility bias.

In my original tweet I missed adding an adjective for the resource. "here's a GREAT buzzword compliant"... and take a look at how the author responded. The tweet got nine favourites on twitter and seven likes on Facebook. People liked the resource, but the author assumed we were being hostile.

Link: <http://www.phptherightway.com>

Wednesday, 22 May, 13

instead of having to hug everything out, let's start with a more structured process that helps us to avoid confusion from the beginning.

Framework  
must be present

# critique is a positive verb

Creator must  
uncouple from  
their work

Reviewer must  
be objective

Wednesday, 22 May, 13

Drupal has a lot of frameworks already in place. Let's take a look at those first.

<http://www.coe.ca/PerformancesAndTickets/1213Season/LaClemenzaDiTito/PhotoGallery.aspx>

“I’m no expert, but I think opera sucks.”

Wednesday, 22 May, 13

When we ask for non-expert reviews, we must tell the reviewer how to frame their feedback otherwise we end up with your classic opera review “I’m no expert, but I think opera sucks.”

[http://barczablog.com/2013/02/25/pageants\\_of\\_powe/](http://barczablog.com/2013/02/25/pageants_of_powe/)

“When a reviewer makes a strong statement I believe there are usually two conversations going on, that are inter-connected. The reviewer is telling us about something. The reviewer is telling us about themselves.”

# Asking For Non-Expert Reviews

Wednesday, 22 May, 13

# Asking For Non-Expert Reviews

Wednesday, 22 May, 13

# Without a framework, chaos ensues.

Wednesday, 22 May, 13

What state are we in?  
Where do we want to go?  
What are the blockers?

- creating a better "ask" that results in the kind of feedback you actually want to receive  
Seeking (Family) Feedback : When I wanted affirmation, I'd ask my mom. When I wanted a critique, I'd ask my father. Are asked in a timely manner. (Don't start writing code until you have buy-in on the direction.)

# Frameworks allow us to work from the same state.

Wednesday, 22 May, 13

What state are we in?  
Where do we want to go?  
What are the blockers?

# Red Outcomes

- Advice and recommendations
- Critical assessments
- Conclusions and decisions

# Ideas to Action

## **Use It When:**

Time is tight and you want a few ideas before deciding.

Wednesday, 22 May, 13

Brainstorm; Make decision

How to use this process:

- select the type of outcome (advice, recommendations, decision)
- share information on the problem for one minute.
- brainstorm ideas.
- eliminate ideas or recombine to ensure the best option is selected

# Facts to Action

## Use It When

You've presented information (e.g. a report) and you want a critique, advice, recommendation, or decision.

Wednesday, 22 May, 13

Share information; Make decision.

Decide ahead of time what type of "red" you need. e.g. advice, recommendation, decision.

# Green outcomes

- Idea generation
- Reframing problems
- Future scenarios

# Information to Options

## **Use It When:**

You need fresh input and a broader number of options, alternatives, or ideas on how to solve a problem before you choose which one is the right one.

# Crux to Options

## **Use It When:**

A team member needs fresh ideas on how to deal with a challenge.

# Yellow outcomes

- Information and clarification
- Analysis and a plan
- Appreciative understanding

# Facts to Understanding

## **Use It When:**

People need to understand the situation better.

# Possibilities to Structure

## Use It When:

You have a complex problem and want to start by looking forward with fresh thinking and end with a plan.

**TO THE ISSUE QUEUE**
